ELECTRONICS AID MANKIND

In every walk of life, science in the shape of electronics is solving in minutes problems that once would have taken years.

In their many forms electronics can see, speak, hear, calculate and memorise, and man can now discover things that previously have been denied him through inaccessibility, danger and complexity.

E.M.I., who made possible the first public High Definition Television System in the world, have played and are playing an increasingly important part in the design, development and manufacture of electronic equipment of all kinds, and the products of Electric and Musical Industries are in service all over the world.

AIRBORNE RADAR (BEAM APPROACH EQUIPMENT)

● TELEVISION TRANSMITTERS, RECEIVERS, AND STUDIO EQUIPMENT ● RADIO TRANSMITTERS AND RECEIVERS ● BROADCAST AND COMMUNICATIONS RECEIVERS (A.M. & F.M.) ● RADIO AND TELEVISION RELAY EQUIPMENT ● EMISCOPE

ALUMINISED CATHODE RAY TUBES FOR DAYLIGHT VIEWING ● ELECTRONIC MEASURING EQUIPMENT

● R.F. INDUCTION & DIELECTRIC HEATERS ● ELECTRONIC DICTATION MACHINES ● RECORDS ● DISC AND MAGNETIC TAPE RECORDERS ● DOMESTIC ELECTRIC APPLIANCES.

5.00—5.20 — —	31.51 m—9.520 kc/s — to Middle East

Listeners all over the world are invited to send reception reports together
with their criticisms and programme suggestions to
the **SHORTWAVE DEPARTMENT, RADIO HOUSE,**
COPENHAGEN V., DENMARK
Answer by letter or QSL-card

P R E F A C E

A preface to the seventh edition of W.R.H. must first and foremost be an expression of thanks to the many broadcasting organisations all over the world which have evinced interest in W.R.H. by assisting in various ways, and particularly to the United Nations' Radio Division and UNESCO, European Broadcasting Union in Geneva and the International Broadcasting Union in Prague for the encouragement given to the work of W.R.H. and for their never-failing understanding of the importance of this in promoting understanding by radio.

Many broadcasting corporations increasingly employ W.R.H. as propaganda and as a medium for their broadcasting and their countries; in so doing they make a valuable contribution towards the fulfilment of W.R.H.'s purpose and at the same time serve their own interests, for it enables the continual enlargement of W.R.H.'s content without any increase of the sales price. It is my hope that still more broadcasting corporations will follow this example in the future.

I must also direct my thanks to the many readers of W.R.H. who regularly forward the listening reports which are such a valuable supplement to the information obtained from the broadcasting-stations all over the globe. I shall be grateful for any reports and criticism.

Finally I have a wish from readers of W.R.H. to the broadcasting organisations: Send your replies (or QSL-card) about readers' reports as quickly as possible – many have to wait for months for an answer – it will promote interest in world listening.

In the present edition is added a list of FM and television stations.

Copenhagen, November 1952.

LUND JOHANSEN

MESSAGE FOR "WORLD RADIO HANDBOOK"

from the United Nations Radio Division

To build a lasting peace it is essential to use every means of furthering understanding. The special contribution broadcasters and telecasters can make is by sending through the air, over all frontiers, news and pictures of what their peoples are doing and thinking and of how their work and their life fit into the story of man's struggle to master his environment and himself.

"World Radio Handbook" brings together all the information needed by broadcasters and radio listeners desirous of following programmes in any other country. We find it indispensable ourselves and cordially commend it to others.

10th November 1952.

PETER AYLEN
Director

United Nations Radio Division

Dear World Listener,

If you, or possible some of your friends, are interested in the aim of WRH: to promote international understanding, we ask you kindly to send us a few words. We have a plan which we think will be of value for this, but your help is necessary for its realisation. If therefore you are interested in this work we shall be glad to hear from you. Interest in *all* countries is necessary and whether or not the plan is to be realised depends on the number of people supporting it. Our application is made not only to the individual but equally to the Radio Clubs and organisations which have aims similar to WRH's.

Cordially yours

Mr. Roberto I. Unanue, one of the members of the staff of the Latin American Service, U. N. Division recording a broadcast at U. N. Headquarters.

Mr. Carlos Palacios, Deputy Director of the Radio Division, United Nations, with letters received from radio listeners in all parts of Central and South America.

Mr. Norman Corwin, (left) Chief of Special projects, United Nations Writer-Producer of "Windows on the World", is seen here with Mr. Douglas Fairbanks Jr., Narrator. Mr. Fairbanks is Honorary Vice President of the American Association for the U. N.

Message from UNITED NATIONS RADIO

*By Carlos Garcia-Palacios, Deputy Director, Radio Division,
Department of Public Information, United Nations.*

The first task of United Nations Radio is to bring the peoples of the world news about what the United Nations is doing and will do to try to establish peace in the world. Thanks to the most friendly cooperation of broadcasting services in almost all 60 member states of the United Nations and in many nonmember countries and territories, United Nations broadcasts are relayed in countries whose populations make up virtually half mankind.

We consider the Radio Division not as a technical instrument, but as a moral force. Its greatest strength, we believe, lies in its complete objectivity. We acquaint listeners with the facts, report all the viewpoints expressed in United Nations meetings and leave it to their intelligence to draw the conclusions. Ours is not a propaganda broadcasting service. It was established in the name of human brotherhood so that the United Nations might reach out to all peoples, to the many millions who listen in the comfort of their own homes, and the many millions who stand or at best sit on the ground near community loud-speakers.

If United Nations Radio played on the sensibilities of peoples, it would be trying to win their interest by trickery. Everyone wants peace but everyone is not able to learn the hard facts which must somehow be fitted together as paving blocks for the road that leads to peace. That is why United Nations Radio offers news, news talks and interviews with delegates and experts as its essential fare.

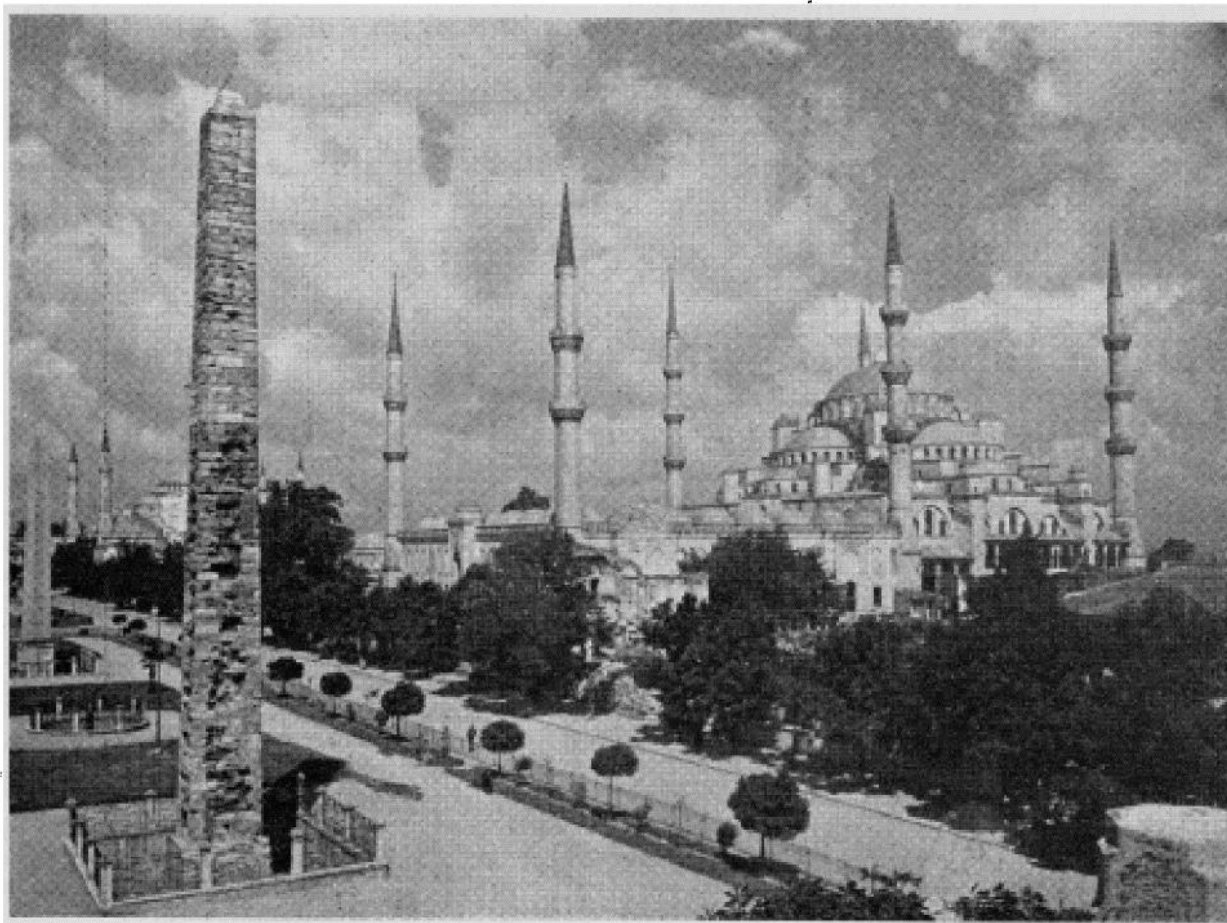

Do not conclude from this that the Radio Division has become a kind of machine which receives information in a hopper at one end and grinds it out mindlessly at the other into bulletins of varying lengths. The men and women broadcasters and their assistants, 90 of them from 29 different countries, are in a constant state of stir and questioning. Will the Security Council vote come in time for the Danish news? This Technical Assistance report is fascinating but can't it be simplified still more? Has this tape interview from Korea been scripted? Shouldn't we »kill« this lead and open with the press conference? So it goes throughout the preparation of the three daily summaries written in English as the basis all of United Nations broadcasts.

In 1952 correspondents from the broadcasting services of eleven member states were stationed permanently at UN headquarters, while many more are coming, as this is being written, to cover the seventh annual session of the General Assembly. Rebroadcasts of United Nations bulletins and radio newsreels were regularly carried in 47 of the 60 member states and in 15 other countries and territories. The regular daily output of news totalled 8½ hours in 25 languages. Plans for televising General Assembly meetings daily on a wider scale than before have been worked out with interested networks, while the Radio Division also prepares kinescoped summaries of meetings in English, French and Spanish.

A steady endeavour to develop the usefulness of its services to national and local broadcasting and television stations and to their correspondents and to maintain high standards for all its own output, this sums up the year's effort of the Radio Division in its work for better understanding among men. If radio waves know no limitations as they sweep round the earth, so should there be no limitations to the free interplay of human minds. These minds, which seem so different, have after all one great common denominator, the desire to find and to share with others happiness and peace.

HOW TO USE THE WORLD RADIOHANDBOOK

The practical information given in the following section in respect of the broadcasting services of each individual country includes:

The Addresses of the broadcasting companies in question. Where broadcasts are commercial, this is stated.
Names and Titles of the leading personalities in each company.

List of Stations operated by each company with call signs of their transmitters, all frequencies and wavelengths (medium- and shortwaves), as well as their power expressed in kilowatts.

Each short-wave station has its own identification call sign consisting of 3–5 letters or a combination of letters and figures of which the first, or first two, denote the nationality in accordance with the international list of station prefixes. Some short-wave stations, the American for example, use these call-signs when announcing themselves.

Long and medium wave stations are divided into three categories, viz. (1) *Main Stations*, which are so powerful that they can generally be heard throughout the whole area of the country in question, and from which most of the broadcasts emanate; (2) *Regional Stations*, which can be heard only within a certain area of the country, and whose broadcasts consist partly of re-transmissions of the programmes of the main stations and partly of their own programmes; (3) *Relay Stations*, which solely re-transmit main station programmes. These relay stations are the weakest, and are local stations which can be heard only within a limited area.

Most short wave stations use directional aerials, i.e. their broadcasts are directed toward particular areas, and these give the names to the various services: European Service, Near Eastern, Middle Eastern, Far Eastern, Pacific, Latin-American, Caribbean Service, etc. Language and frequency employed vary according to the area to which broadcasts are directed.

Times are shown on the 24 hours system. In this system midnight is 00.00 hrs., 3 am: 03.00 hrs., 10 am: 10.00 hrs. and midday 12.00 hrs. Instead of starting again at 1 o'clock, as the 12-hour system does, the 24-hour system continues to increase the number of each hour until 23.59 (11.59 pm.) is reached. Thus 13 hrs. is 1 pm., 17.00 hrs. 5 pm. and so on. The great advantage of the system is that it eliminates any possible confusion between times a.m. and times p.m.

Frequency and Wavelength.

Frequency and Wavelength are divided into the following groups:

Long waves with frequencies from 133 kc/s (1961 metres) to 500 kc/s (600 metres).

Medium waves with frequencies from 500 kc/s (600 metres) to 3000 kc/s (100 metres).

Short waves with frequencies from 3000 kc/s (100 metres) to 30000 kc/s (10 metres).

The wavelength of a station is measured in metres, a metre being approximately $1\frac{1}{10}$ yards. The wavelength is the distance in metres between the crests of any two consecutive waves. For every wavelength there is a corresponding frequency, which is the number of complete waves, or cycles, sent out by a station in every second. A kilocycle is 1000 cycles; a megacycle 1.000.000 cycles.

Shortwave broadcasting takes place mainly on the following metre bands (m.b.):

49 metre band – 41 metre band – 31 metre band – 25 metre band – 19 metre band – 16 metre band – 13 metre band and 11 metre band.

Many short-wave stations lie outside these bands. The 60 and 80 metre bands are used for local broadcasting, i.e. for reception over relatively short distances, which applies, for example, to many South and Central American stations and stations in Central Africa.

The property possessed by the short waves of spanning great distances with strong signals has encouraged the countries of the world to make use of them for broadcasting purposes.

The British Broadcasting Corporation (BBC), The Voice of America (U.S.A.), Canada, France, the Soviet Union, and many other large countries maintain comprehensive and extensive short-wave services for the benefit of listeners all over the world.

In the following pages you will find a large variety of call-signs and frequencies. In many cases these belong to the same transmitters which are connected to different aerials designed to radiate signals to the best advantage in respect of each service. The various call-signs serve to identify individual transmissions and frequencies.

Many programmes are broadcast simultaneously from several transmitters on different frequencies, which enables you to select the one which is the most clearly audible in your area or on your particular receiver. If reception on one of the frequencies used is poor, you should examine reception conditions on the other frequencies employed by the same station.

Daily Programmes: Under this heading you will find information concerning the total broadcasting hours on the different frequencies employed during transmission hours, as well as a survey of the news.

Announcements:

The language alone is not a conclusive indication of the origin of a broadcast to which you may be listening. Hearing a programme in French or Spanish, for instance, does not necessarily mean that it is transmitted by a French or Spanish station respectively. To make sure of identifying a station correctly,

it is, therefore, essential to wait for the announcement which every station broadcasts at regular intervals. These call signs are given in this book for practically all the stations listed.

Interval-Signals:

For identifying stations it is also of importance to know the signals used during the intervals between programme items. Under each station you will, therefore, find an indication of the type of signal used, and in many cases also a reproduction of the musical notes of this signal.

QSL Cards:

As indicated in the survey of the broadcasting services of the various countries, many of the stations listed are interested in receiving reports from listeners in respect of their transmissions. These stations acknowledge such reports by sending listeners a QSL (verification) card or a letter. For most of these stations it is stated whether reports are answered by QSL-card or letter.

Many short-wave listeners make a hobby of collecting these QSL-cards which are often elaborately designed and colourful, sometimes with pictures of the station and its location, photos of the personnel, and other interesting particulars.

Reports from Listeners:

Listeners' reports can in most cases be written in English, but Spanish is preferable when writing to South or Central American stations. Each report should contain information as to wavelength, date, time, program heard, intelligibility, strength of reception and whether there was any fading, i.e. variable strengths (QSB), interference from another station (QRM), and static, i.e. atmospheric interference (QRN). – In the case of an amateur transmitter, the report should also contain the call letters of the station.

Moreover, it is helpful to add details of your own location, as well as of the type of receiver and aerial used for listening. If reply postage is requested by a station, enclose with your reports an International Reply Coupon obtainable at most post offices.

Greenwich Mean Time (G. M. T.) should be used for all time indications. – The full address of each station will be found in the individual surveys for each country

Intelligibility	Strength	Interference
QRK1 – unintelligible	QSA1 – unreadable	QRM – interference from another station
QRK2 – partly unintelligible	QSA2 – weak	QRN – atmospheric interference (static)
QRK3 – intelligible with difficulty	QSA3 – fairly good	QSB – variable strengths (fading)
QRK4 – quite intelligible	QSA4 – good	
QRK5 – easily intelligible	QSA5 – very good	

Future Plans:

Many stations have made known their development plans for the immediate future. These include: – Increase of power, new transmitters, etc.

Lists of Long, Medium, Short Wave, F.M. and Television Stations:

A complete list of the world's broadcasting and television stations, arranged in order of frequencies.

Local Time Conversion:

On page 16 you will find a Local Time Conversion Table which gives the local times (summer and winter) in most parts of the world in relation to Greenwich Mean Time (G.M.T.). For example, from September to May it is 15.00 hours New York time when it is 20.00 hours G.M.T., since the table indicates that local time in New York is 5 hours ahead of G.M.T. From May to September U.S.A. introduces day-light saving time and, consequently, it is 16.00 hours New York time when it is 20.00 hours G.M.T.

How to tune in your favourite short-wave station:

It requires some practice to adjust receivers correctly to a short-wave station. A movement to either side by a mere hair's breadth may give the correct adjustment. Once the station has been found, it must be finely adjusted by gently turning the dial knob backwards and forwards, simultaneously increasing the volume until the station in question can be heard distinctly, and identified. If the tuning knob is turned too quickly, a weak station may easily be passed over.

Reception conditions for short waves can be very capricious. After listening to a far-distant station for a short time, it may suddenly disappear completely (fade) and not return immediately.

Some broadcasts are often transmitted on several wavelengths simultaneously. If after adjusting your receiver to the station to which you wish to listen, you find reception unsatisfactory, try the other wavelengths used by the same station during the period in question.

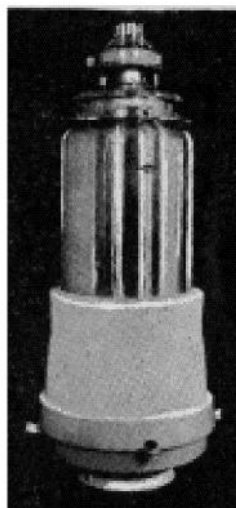

How to identify a short-wave station:

Whenever you come across a station which is unknown to you, proceed as follows for identification: Read the approximate frequency indicated on your dial in megacycles or kilocycles or the wavelength in metres. Find from the table of frequencies and wavelengths what stations are working in the neighbourhood of the reading shown by your dial. When you have reduced the source of the broadcast to one or two possibilities and at the same time noted details of the program heard and the language used, check these data against the program surveys printed in this Handbook. For confirmation it is advisable to wait for the station announcement or interval signal mentioned previously.

NIPPON HOSO KYOKA.

The Broadcasting Corporation of Japan.

Working through the media of Press, Film and Radio, the Department of Mass Communication of the United Nations Educational, Scientific and Cultural Organization strives to improve international understanding by promoting the greatest possible flow of information between peoples. In so doing, the Department serves one of UNESCO's most fundamental aims, playing its role in relaxing international tensions and in the universal struggle for peace and progress.

The Radio Division of the Department of Mass Communication shares in this task through its output of recorded and scripted programmes. These are produced in a variety of languages and are made available to networks and stations of all countries. Last year, more material was produced than ever before. Over 4,720 copies of recorded programmes made in 23 languages, were despatched to some 85 countries and territories around the world.

In addition, the Division's scripted quarter-hour programme, the "UNESCO WORLD REVIEW"—a weekly radio bulletin now completing its fourth year of publication—continues to enjoy growing success. In English, Spanish, French and Arabic, the "World Review" is mailed to radio organizations all over the world. From letters received, it is estimated that at least 102 stations in 57 countries and territories broadcast it in full or in part, as do another 233 stations in the U.S.A.

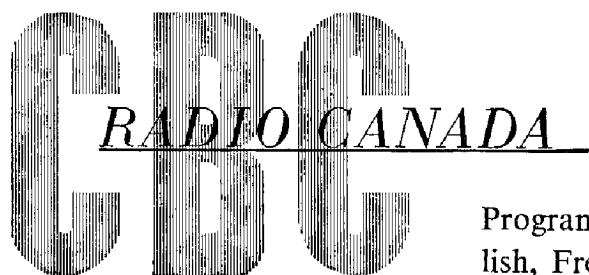

The Radio Division this year is placing increased emphasis on direct co-operation with radio organizations in Member States. It has already arranged for UNESCO programmes to be made in its studios by radio reporters and producers from Dutch, German, Austrian, Swiss, Italian and French networks. The BBC has produced eleven educational programmes at UNESCO House.

Many networks lately have been relaying upon UNESCO's Radio Division for programme ideas as the starting-point for their own productions. Others have gone further, accepting not only the programme theme, but UNESCO scripts, background material and sound effects, and using these as the basis of their own adaptations. Such has also been the case in television production; the BBC recently prepared two television programmes that relied primarily on materials furnished by UNESCO.

In thus intensifying and diversifying its activities, the Radio Division hopes that it is helping develop the listening public's interest in news on education, science and culture, that it is assisting in the free exchange of such information, and that it is sharing in the furtherance of the positive ideals of UNESCO and the United Nations.

GORDON FRASER

Head, Radio Division, Dept. of Mass Communication.

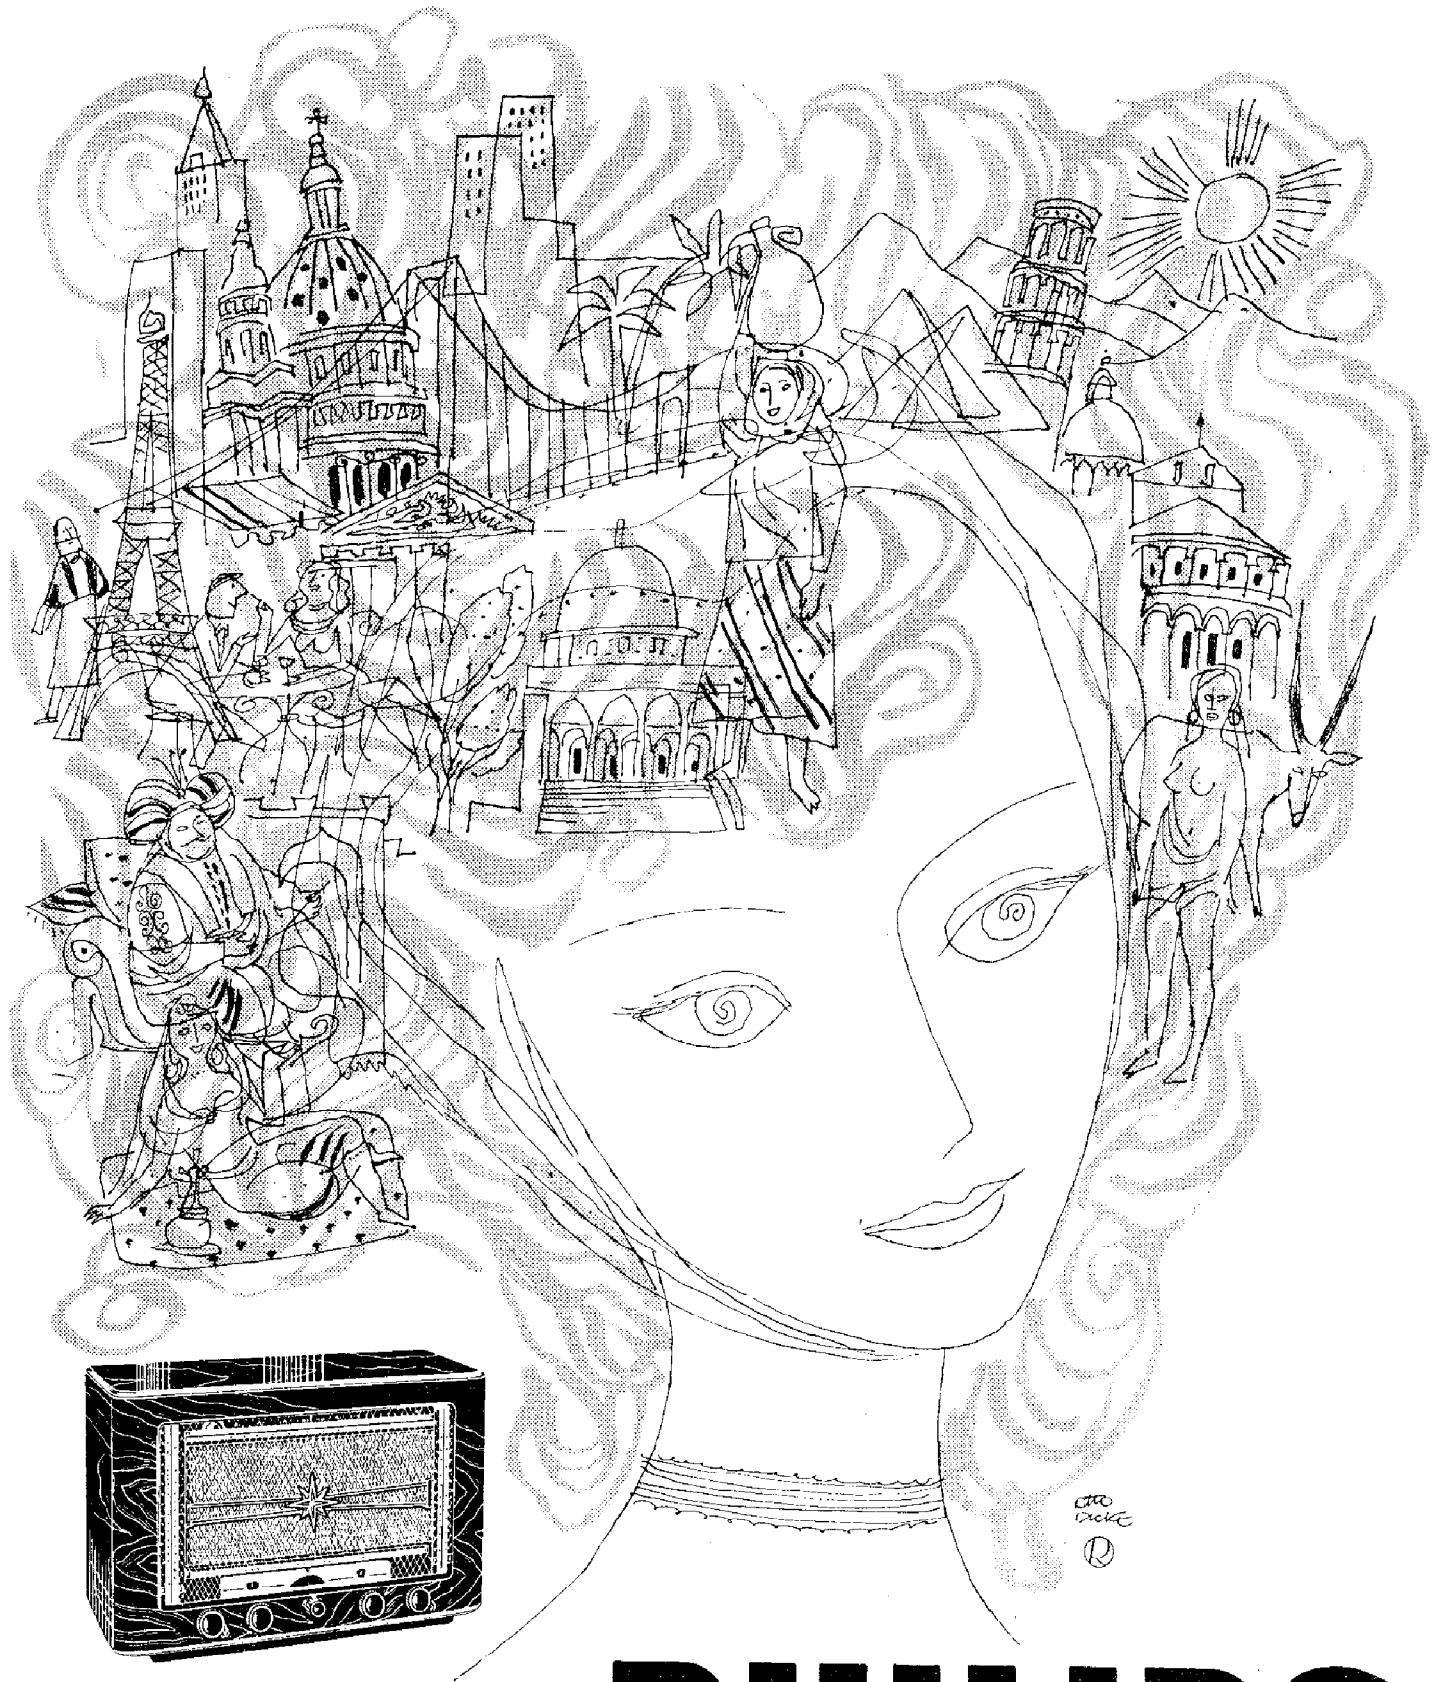

Programs from Canada are broadcast daily to Europe in English, French, Dutch, Czech, Slovak, German, Danish, Norwegian, Swedish, Italian, Finnish, Ukrainian, and Russian; to the Caribbean and South America in English, Spanish, Portuguese, French, and Dutch (Dutch is heard by listeners in the Caribbean on Saturdays). Every Sunday and Wednesday programs in English are broadcast to the Southwest Pacific. Listeners in all countries are invited to tune in to Canada's International Service and to write for a monthly program schedule.

PHILIPS

Roaming around the world in your armchair

Few of us have ever had the opportunity to go and see places all over the world. To see famous towns, to be eye-witnesses at great world-events, to attend concerts conducted by a Toscanini or other world-famed maestros, or to learn what is going on in other countries.

But do you realize that you can make real world trips day after day whenever you want? You can do it with a Philips radio. Philips radio spans the world and brings continents and countries so close to each-other that one day could be enough to visit London with its famous Music Halls, to hear real old Vienna waltzes, to dance with your friends on the music of America's favourite dance orchestras, to attend an international sport-meeting in France or to dream whilst listening to the soft and melodious music of the Hawaiian islands.

This is what radio can do, especially radio sets with well-balanced short-wave reception possibilities.

Philips are one of the pioneers in modern radio, particularly on short-wave reception and transmission. From 1927, when the first Philips' short-wave transmission on Philips own station in Holland could be clearly heard in all corners of the world, Philips have been in the field to develop radio to its wonderful perfection of our present days.

This restless research, with many achievements, for which Philips are directly responsible, culminates in a wide range of excellent radio receivers for reasonable prices. Sets for everybody. Sets enabling you to roam all over the world day after day whenever you want.

PHILIPS SERVE THE ENTIRE WORLD

The last 15 minutes of the daily one hour broadcast for "Norwegians abroad" will usually consist of Norwegian music or music by Norwegian artists. This section is introduced in both English and Norwegian. To these transmissions a 15-20 minutes programme in English "Norway this week" is added every Sun.

Every Saturday (and sometimes Wedn.) a "Letter-Box" program is broadcast in Norwegian and English (the last 1/2 hour of the transmission), in which listeners letters are answered and their musical request are honoured.

Announcements: "This is Radio Norway with its short-wave service for Norwegians abroad".

Every *shortwave-transmission* to Norwegians abroad is introduced by a Norwegian folkmelody from Hallingdal:

At opening and close down: Choir (Norwegian music).

Message to Listeners: Reports are answered by QSL-cards – and by radio Saturday evening in the English-Norwegian "letter-box" feature program.

POLAND

Address: Komitet do Spraw Radiofonii "Polskie Radio", Aleja Stalino 21, Warsaw. – *Cable:* Polskie Radio Warsaw.

Leading Personalities: For the leading of the Broadcast a leading Committee was formed October 1st 1951. Leading Personalities of the Committee are to be fixed later.

Verification by letter.

Do you ever listen to

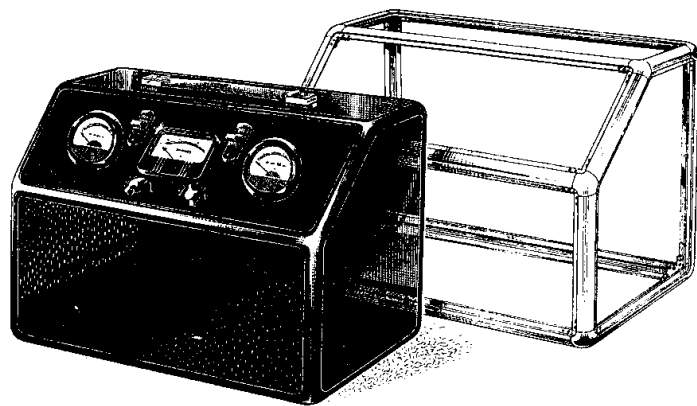

RADIO NORWAY?

The transmissions are to a great extent aimed at keeping Norwegians abroad and the members of the Norwegian Merchant Marine, which is roaming the Seven Seas, informed about the latest happenings in their homeland. But the last 15 to 20 minutes of each of the six daily transmissions beamed towards all parts of the Globe will usually consist of Norwegian music, which is introduced in English as well as in Norwegian. And every Saturday, and also very often on Wednesdays, the last half hour of the transmissions will be a letter box programme, in which is played listeners' request records. Just write to RADIO NORWAY, SHORT WAVE DIVISION, OSLO, NORWAY. For technical details, see page 44. Every Sunday an additional 20 minute programme in English, NORWAY THIS WEEK, is added to all the special transmissions.

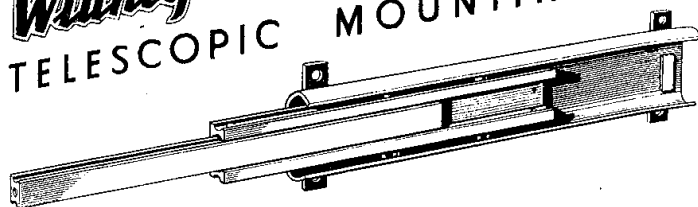

Widney-DORLEC

CABINET SYSTEM

The Widney-Dorlec Cabinet System consists of a series of prefabricated diecast corners, extruded sections and various other components which enable modern fully radiused cabinets, etc., etc., to be built without special tools.

Widney TELESCOPIC MOUNTINGS

Telescopic Mountings offer the most convenient means of obtaining complete accessibility of rack mounted equipment as each chassis can be withdrawn completely clear of its framework for easy examination.

Verification by QSL-card. Return postage not required.

Message to Listeners:

In our Foreign Service the Voice of Free China has seven languages beaming daily to America, Europe, Japan and Korea, Middle East, Southeast Asia and Southsea Islands. Our languages in general use are English, French, Japanese, Korean, Malayan, Russian and Arabic, together with a variety of Mandarin, Fukienses, Cantonese, as well as the Chinese Hakka, Chouchow, Turkistan and Tibetan dialects. The man in charge of this vast program in the Foreign Language Division is Dr. Elbert Chen. We should like very much that our listeners will make reports and advices on our programs.

»O Canada«:

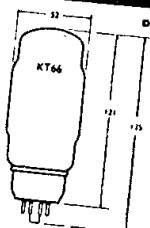

Message to Listeners: The Voice of Canada greets short-

This is Britain's famous power amplifying tube... for years the favorite tube of experimenters and research laboratories; acknowledged in every country of the world to be the finest tetrode ever made. It is currently used in the Leak, Williamson, Radio Craftsmen and other fine amplifiers.

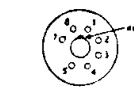

The KT66 is a versatile power tetrode with a number of useful applications. It may be used in the output stage of an audio-frequency power amplifier, either tetrode-connected for maximum sensitivity and power output or triode-connected for high quality working. In transmitting circuits using frequencies up to 30 Mc/s it may also be used as an oscillator or as a radio frequency amplifier.

A high slope, indirectly heated beam tetrode, the KT66 is suitable for either single or push-pull audio operation and may be employed as a beam tetrode with aligned grids. This alignment of the grids reduces losses in the screen and makes for the highest possible power conversion efficiency. With this system of construction high orders of power output may be obtained with a low screen dissipation, and the anode is designed to dissipate 25 watts continuously with a reliable life performance.

THE FINEST AUDIO TUBE
EVER MADE!
KT66

UNITED STATES OF AMERICA

"THE VOICE OF AMERICA" is operated by the Broadcasting Service of the Department of State's International Information Administration. The VOA aims to promote an increased understanding of the United States among the peoples of the world and to strengthen cooperative international relations.

VOA radio relay installations are located at Honolulu, Manila, Colombo, Munich, Tangier, Salonika and aboard the VOA's floating transmitter—the U.S. Coast Guard cutter "Courier". Relay facilities are also leased from the BBC.

Programs are written, produced and broadcast from studios in New York, N.Y., Washington, D.C., and Munich, Germany.

Address: "The Voice of America", 1790 Broadway, New York 19, N.Y.

Leading Personalities: Administrator. International Information Administration Dr. Wilson Compton; Deputy Administrator for the Broadcasting Service Mr. Alfred Hammond Morton; Chief, Division of Radio Program Operations Mr. Alfred Puhon; Chief, Division of Radio Facilities Plans and Development Mr. George Q. Herrick; Chief, Division of Radio Facilities Operations Mr. James

F. Thompson; Chief, Division of Radio Program Evaluation Mr. Leo Lowenthal.

RADIO CONTINENTE. *Cable:* Continente. **Leading Personalities:** President Mr. Caleb W. White jr., Director General Mr. J. Francisco Rodriguez.

Stations: YVKM 5030 kc/s 59.67 m 7.5 kW. 590 kc/s 509 m 1 kW. Under construction YVKL 20 kW.

Daily Programmes: *News* 10.30-11.00. "El Bachiller y Bartolo": Mo.-Fri. 21.30-23.45. "La Bodega de la Esquina": Tues.-Sat. 02.35-02.50. These two programmes are considered to be the best programmes in Venezuela. *Concert:* Thurs. 01.05-02.05. *Venezuelean Music:* Wedn. Fri. 01.05-02.05 and Sat. 02.30. "Lo Que Pasa en el Mundo": 22.55-23.05. "Revista Internacional": Tues.-Sat. 01.05-01.20. *Venezuelean Music performed by "Orquestra Criolla":* Sun. 00.30-01.00.

Announcement: "Cubriendo cada metro cuadrado del territorio nacional, transmite Radio Continente. La Primera en el Cuadrante la Primera en Calidad, 590 kc/s para su Onda Larga, y 5030 kc/s para su Onda Corta".

Interval-Signal: Venezuelean Music. **Verification** by letter.

Standard Frequency Stations

STANDARD FREQUENCY STATIONS RADIO STATIONS WWV and WWVH

Addresses: 1. Radio Station WWV, National Bureau of Standards, Washington 25 D.C. 2. Radio Station WWVH, Puunene, Maui, Hawaii.

Stations: *WWV*. broadcast night and day standard frequency, time signals, time announcements, in voice and code. Radio propagation disturbance warnings at 19¹/₂ and 49¹/₂ min. after the hour on 2500 (0.7 kW), 5000 (8 kW), 10000 (9 kW), 15000 (9 kW), 20000 (8.5 kW), 25000 (0.1 kW), 30000 (0.1 kW), * 35000 (0.1 kW). * - *WWVH*. broadcasts standard frequency, time signals, time announcements in code on 5000 (2 kW), 10000 (2 kW), 15000 (2 kW); continuous exc. for interruptions of four minutes after the hour and half hour and off. 34 minutes at 19.00. During week incl. third Tuesday of each month broadcast interrupted from 19.00 to 22.00 as follows: 5000 kc/s on Tuesday, 10000 kc/s on Wednesday, 15000 on Thursday. *to be discontinued Jan. 1 1953.

Interval Signal: 600 cycle tone first four minutes, one minute announcements, 440-cycle tone next four minutes, one minute announcements; repeat every ten minutes.

Message to Listeners: WWV answers reports by QSL-card or letter. WWVH answers by letter.

In the interest of World Radio and a better understanding between all nations and peoples of the world we wish to get into touch with interested listeners in all countries who will act as correspondents for "The World Radio Handbook" and in that capacity work for the spreading of knowledge about it. Write to "World Radio Handbook", Lindorffalle 1, Hellerup, Denmark, for further particulars.

A NEW WORLD WIDE REFERENCE BOOK:

WORLD RADIO VALVE HANDBOOK

gives the radio engineer and the radio technician at a glance the correct answer to any practical question concerned with receiving and amplifying valves of any makes:

- Replacement or substitute valves wherever there are suitable types.
 - Classifies valves of all kinds of the basis of their electrical data.
 - Provides full information about base and pin connections.
- RECEIVING VALVES OF THE
WORLD, THEIR DATA, USES
AND INTERCHANGEABILITY
AT A GLANCE

Price: 11/6 d or \$ 1,75 plus postage or the equivalent in local currency. Obtainable from the distributors of WRH or from the World Radio Handbook, 1, Lindorffsallé, Hellerup, Denmark.

Write for pamphlet and further particulars.

The acknowledged technical authority

WIRELESS WORLD is Britain's leading technical magazine in the general field of radio, television and electronics. Founded over 45 years ago, it provides a complete and accurate survey of the newest British technique in design and manufacture. Articles of a high technical standard cover every phase of the radio and allied industries, whilst critical reviews are regularly included. Theoretical articles by recognised experts deal with design data and circuits for every application. "Wireless World" is indispensable to all manufacturers and technicians and is read all over the world.

INVALUABLE TECHNICAL BOOKS

RADIO VALVE DATA. Compiled by "Wireless World" staff. Gives characteristics of over 2,000 receiving valves. 79 pp. 3s 6d net. By post 3s 9d.

RADIO LABORATORY HANDBOOK (5th Ed.) By M. G. Scroggie, B. Sc., M.I.E.E. Shows the methods available for carrying out tests and measurements with either commercial or improvised equipment. 430 pp. 15s net. By post 15s 5d.

MICROPHONES: A BBC Engineering Training Manual. A text book on microphones originally written for BBC engineers. 112 pp. 15s net. By post 15s 5d.

WIRELESS SERVICING MANUAL (8th Ed.) By W. T. Cocking, M.I.E.E. Describes essential testing apparatus, logical testing methods and the process of deducing and remedying defects. 298 pp. 12s 6d net. By post 12s 11d.

THE WORLD'S LEADING JOURNAL ON RADIO & TELEVISION

built to TUNE IN THE WORLD!

In 2 Easy Steps...

1

Flip on crystal CALIBRATION OSCILLATOR. Continuous tone signals will be heard at exact 500 kc intervals from 2000 kc through 56000 kc.

2

Use RESET CONTROL to adjust dial pointer. Coincide with exact frequency of this test signal.

YOU'RE THEN "ON FREQUENCY" WITH PIN-POINT ACCURACY. IF DESIRED STATION IS THERE TO BE HEARD—YOU'LL BRING IT IN!

"The GLOBEMASTER" **SX-62**

The only Radio with all these features

- **High-fidelity reception** on all wave bands—Standard Broadcast, FM and Short Wave.
- **World-wide frequency range**, with continuous coverage from 540 kc through 110 Mc, AM or FM!
- **Flexibility of control**, with six degrees of selectivity, separate sensitivity and volume controls, plus automatic noise limiter and beat frequency oscillator.
- **Ease of tuning** with hair-line accuracy. Six broad scales with over 150 stations marked; calibration oscillator for checking frequency as explained above.

There's a Precision Hallicrafters
for you from **\$44⁵⁰**
to **\$289⁵⁰**
